

**Amendments to the Abstract:**

Please insert the following paragraph as the abstract of the application filed concurrently herewith:

**ABSTRACT**

Method and device for combining images from at least two light projectors, the images having a transition zone between them, wherein the dimensions of the transition zone is known, and the emitted light toward the transition zone from each projector is based on a predetermined transfer function from input signal to projected image for each projector in the transition zone, so as to obtain predictable image characteristics in the transition zone.
